

CROSSROADS TECH SERVICES

Hazard Monitoring · Security & Fleet Cameras · Alarms · Access Control · IT

A DIVISION OF CROSSROADS COOPERATIVE ASSOCIATION · EST. 1909 · SIDNEY, NEBRASKA

We install and service the systems grain facilities run on — and we run them ourselves.

Crossroads Tech Services is the technology arm of a working grain cooperative operating 13 sites across the Nebraska panhandle, eastern Wyoming, and northeast Colorado. Every system we sell, we run on our own facilities first.

FACILITY TYPES
INSTALLED

HAZARD MONITORING — AGI CMC CERTIFIED

- Bearing temperature, rub blocks, speed & alignment, plug detection, and bin level monitoring
- PLC integration and networking to the systems your people already watch
- New installs, retrofits on older legs, and takeover service on other contractors' systems
- Second-opinion reviews of competing quotes
- Insurance and OSHA recommendation response, phased around harvest

TESTING & SERVICE AGREEMENTS

- Annual, semi-annual, or quarterly sensor testing — every point function-tested to alarm
- Shutdown and interlock paths verified end to end
- Written, dated reports your carrier or auditor will accept
- We test systems we didn't install, including orphaned ones

VEHICLE & FLEET CAMERAS

- Semi tractors and grain trucks: both-side blind-spot and forward road-facing cameras with mobile DVRs
- School bus interior, stepwell, and road-facing systems, tested fleet-wide before each school year
- Footage retrieval for incident review and insurance claims

SECURITY, ALARMS & ACCESS CONTROL

- IP camera systems for schools, law enforcement, elevators, and 25+ facility types
- Monitored intrusion alarms on Alarm.com with 2GIG sensors, plus supplemental smoke and heat detection (not a substitute for required fire systems)
- 24/7 professional monitoring
- Card and fob access control with lockdown configurations and entry logging

MANAGED IT & NETWORKING

- Remote monitoring, patching, backup, and help desk for small business
- Point-to-point wireless, VLANs, and secure tunnels for remote rural sites

Why facilities choose us

Software people don't know grain handling. Most installers don't do IT. Our crew holds AGI CMC Level 2 certification, Class II Div 1 & 2 experience, and runs a 13-site network — the whole job, one contractor.
